

# Too Much of a Good Thing: Why Health Care Spending wont Make Us Sick

The conventional wisdom is that runaway health care costs pose a major long-term threat to the economy of the United States. Government statistics show that those costs have been increasing faster than the overall inflation rate for decades. According to recent estimates, in the near future, health care could account for as much as 25 percent of the nations gross domestic product. In this book, Charles R. Morris argues that increased spending on health care in and of itself may not be harmful to the economy. Morris makes the case that while aggregate health care spending will climb as the population ages and lifespans increase, the costs of many medical services will actually decline as productivity improves in ways that statistics fail to adequately measure. Morris argues that, if higher health care spending coincides with an improved quality of life for more Americans, along with increasing numbers of highly compensated jobs in the medical sector, the nation may be better off.

why health care spending wont make us sick Spending versus Health Care Costs -- Health Care and the Economy -- Technology and Health Paul Melquist says he is frustrated that his insurance costs are so They are healthy people who buy their own coverage but earn too much to qualify for and the first \$6,550 [for health care expenses] for each of us comes out of our pocket. So We try to be good citizens and do the right thing, she says.
