

Powder Coatings: Chemistry and Technology

Thirty years have passed since the appearance of the first powder coating. A growing number of industries are currently having to adopt non-polluting systems due to concerns for the environment and new emissions regulations. These changes have brought about an increased use of organic powder coatings. It summarizes the rapid developments and achievements of the last two decades. Emphasizing the chemistry and film formation of thermosetting powder coatings, it covers the parameters that influence powder coating properties, the technology of powder coating production, and application techniques. There is also discussion of potential future developments in powder coatings with respect to binders, improved production and application techniques, and the powder coatings market.
